

Торіс	Student Checklist	R	Α	G
4.6.1 Rate of reaction	Calculate the rate of a chemical reaction over time, using either the quantity of reactant used or the quantity of product formed, measured in g/s, cm ³ /s or mol/s			
	Draw and interpret graphs showing the quantity of product formed or reactant used up against time and use the tangent to the graph as a measure of the rate of reaction			
	HT ONLY: Calculate the gradient of a tangent to the curve on the graph of the quantity of product formed or reactant used against time and use this as a measure of the rate of reaction			
	Describe how different factors affect the rate of a chemical reaction, including the concentration, pressure, surface area, temperature and presence of catalysts			
	Required practical 5: investigate how changes in concentration affect the rates of reactions by a method involving measuring the volume of a gas produced, change in colour or turbidity			
	Use collision theory to explain changes in the rate of reaction, including discussing activation energy			
	Describe the role of a catalyst in a chemical reaction and state that enzymes are catalysts in biological systems			
	Draw and interpret reaction profiles for catalysed reactions			
4.6.2 Reversible reactions and dynamic equilibrium	Explain what a reversible reaction is, including how the direction can be changed and represent it using symbols: A + B \rightleftharpoons C + D			
	Explain that, for reversible reactions, if a reaction is endothermic in one direction, it is exothermic in the other direction			
	Describe the State of dynamic equilibrium of a reaction as the point when the forward and reverse reactions occur at exactly the same rate			
	HT ONLY: Explain that the position of equilibrium depends on the conditions of the reaction and the equilibrium will change to counteract any changes to conditions			
	HT ONLY: Explain and predict the effect of a change in concentration of reactants or products, temperature, or pressure of gases on the equilibrium position of a reaction			

	AQA Chemistry (8462) from 2016 Topics C4.7 Organic chemistry			
Topic	Student Checklist	R	Α	G
4.7.1 Carbon compounds as fuels and feedstock	Describe what crude oil is and where it comes from, including the basic composition of crude oil and			
	the general chemical formula for the alkanes			
	State the names of the first four members of the alkanes and recognise substances as alkanes from			
	their formulae			
as	Describe the process of fractional distillation, state the names and uses of fuels that are produced from			
ads K	crude oil by fractional distillation			
ompound feedstock	Describe trends in the properties of hydrocarbons, including boiling point, viscosity and flammability			
	and explain how their properties influence how they are used as fuels			
cor fee	Describe and write balanced chemical equations for the complete combustion of hydrocarbon fuels			
uo	Describe the process of cracking and state that the products of cracking include alkanes and alkenes			
arb	and describe the test for alkenes			
ů I	Balance chemical equations as examples of cracking when given the formulae of the reactants and			
.7.1	products			
4	Explain why cracking is useful and why modern life depends on the uses of hydrocarbons			
	Chem ONLY: State the names and draw structural formulae of the first four members of the alkenes			
s	and recognise substances as alkenes from their formulae			
loh	<i>Chem ONLY: Describe the basic composition of alkenes, including the C=C functional group, the general</i>			
col	chemical formula for the alkanes and describe what unsaturated means			
4.7.2 Reactions of alkenes and alcohols	Chem ONLY: Describe the combustion reactions of alkenes and the reactions of alkenes with hydrogen,			
an	water and the halogens			
Jes	Chem ONLY: Draw fully displayed structural formulae of the first four members of the alkenes and the			
ker	products of their addition reactions with hydrogen, water, chlorine, bromine and iodine			
fal	Chem ONLY: State the functional group of alcohols and the first four members of the homologous series			
s o	of alcohols and represent alcohols using formulae			
ion	Chem ONLY: Describe some properties and reactions of the first four members of alcohols, including			
act	dissolving in water, reacting with sodium, burning in air, oxidation and uses			
Re	Chem ONLY: State the functional group of carboxylic acids and the first four members of the			
7.2	homologous series of carboxylic acids and represent them using diagrams and formulae			
4	Chem ONLY: Describe some properties and reactions of carboxylic acids, including dissolving in water,			
	reacting with carbonates and reacting with alcohols			
	Chem ONLY: Describe how alkenes can be used to make polymers by addition polymerisation			
II	Chem ONLY: Identify addition polymers and monomers from diagrams and from the presence of the			
ıturally rs	functional group and draw diagrams to represent the formation of an addition polymers			
natu iers	Chem & HT ONLY: Describe the process of condensation polymerisation and explain the basic			
	principles of condensation polymerisation			
c al pol	Chem & HT ONLY: State that amino acids have two different functional groups in a molecule and			
ing ing	they react by condensation polymerisation to produce polypeptides			
urri L	Chem & HT ONLY: Explain that different amino acids can be combined in a chain to produce proteins			
Synthetic and na occurring polyme	Chem ONLY: Describe DNA as a large molecule of two polymer chains made from four different			
	monomers called nucleotides in the form of a double helix			
4.7.3	Chem ONLY: State and describe some other naturally occurring polymers such as proteins, starch and			
	cellulose			

Personalised Learning Checklists AQA Chemistry Paper 2

	AQA Chemistry (8462) from 2016 Topics C4.8 Chemical analysis			
Торіс	Student Checklist	R	Α	G
4.8.1 Purity, formulations and chromatograph & 4.8.2 ID of gases	Define a pure substance and identify pure substances and mixtures from data about melting and boiling points			
	Describe a formulation and identify formulations given appropriate information			
	Describe chromatography, including the terms stationary phase and mobile phase and identify pure substances using paper chromatography			
	Explain what the Rf value of a compound represents, how the Rf value differs in different solvents and interpret and determine Rf values from chromatograms			
1 Purit atogra	Required practical 6: investigate how paper chromatography can be used to separate and tell the difference between coloured substances (inc calculation of Rf values)			
4.8.1 chroma	Explain how to test for the presence of hydrogen, oxygen, carbon dioxide and chlorine			
and	Chem ONLY: Identify some metal ions from the results of flame tests and describe how to conduct a flame test			
mical	Chem ONLY: Describe how sodium hydroxide solution can be used to identify some metal ions and identify metal ions from the results of their reactions with sodium hydroxide solution			
oy che eans	Chem ONLY: Write balanced equations for the reactions between sodium hydroxide solution and some metal ions to produce insoluble hydroxides			
ions k pic m	Chem ONLY: Describe how to identify carbonates using limewater			
fication of ions by ch spectroscopic means	Chem ONLY: Describe how to identify negative ions, including halide ions using silver nitrate and sulfate ions using barium chloride			
4.8.3 Identification of ions by chemical and spectroscopic means	Required practical 7: use of chemical tests to identify the ions in unknown single ionic compounds			
3 Iden	Chem ONLY: State the advantages of using instrumental methods to identify elements and compounds compared to chemical tests			
4.8.5	Chem ONLY: Describe the process of and how to use flame emission spectroscopy to identify metal ions; interpret the results of a flame emission spectroscopy tests			

	AQA Chemistry (8462) from 2016 Topics C4.9 Chemistry of the atmosphere			
Торіс	Student Checklist	R	Α	G
	Describe the composition of gases in the Earth's atmosphere using percentages, fractions or ratios			
4.9.1 The composition and evolution of the Earth's atmosphere	Describe how early intense volcanic activity may have helped form the early atmosphere and how the oceans formed			
ie compositi tion of the Ea atmosphere	Explain why the levels of carbon dioxide in the atmosphere changes as the oceans were formed			
9.1 The composition an evolution of the Earth's atmosphere	State the approximate time in Earth's history when algae started producing oxygen and describe the effects of a gradually increasing oxygen level			
4.9 e	Explain the ways that atmospheric carbon dioxide levels decreased			
and use	Name some greenhouse gases and describe how they cause an increase in Earth's temperature			
ioxide eenho	List some human activities that produce greenhouse gases			
4.9.2 Carbon dioxide and methane as greenhouse gases	Evaluate arguments for and against the idea that human activities cause a rise in temperature that results in global climate change			
l.9.2 Ca methai	State some potential side effects of global climate change, including discussing scale, risk and environmental implications			
-	Define the term carbon footprint and list some actions that could reduce the carbon footprint			
ו tants es	Describe the combustion of fuels as a major source of atmospheric pollutants and name the different gases that are released when a fuel is burned			
4.9.3 Common atmospheric pollutants and their sources	Predict the products of combustion of a fuel given appropriate information about the composition of the fuel and the conditions in which it is used			
.9.3 Cc spheric d their	Describe the properties and effects of carbon monoxide, sulfur dioxide and particulates in the atmosphere			
4. atmos anc	Describe and explain the problems caused by increased amounts of these pollutants in the air			

	AQA Chemistry (8462) from 2016 Topics C4.10 Using resources			
Торіс	Student Checklist	R	Α	G
	State what humans use Earth's resources for, give some examples of natural resources that they use			
4.10.1 Using the Earth's resources and obtaining potable water	Define the term finite and distinguish between finite and renewable resources			
ain	Explain what sustainable development is and discuss the role chemistry plays in sustainable			
obt	development, including improving agricultural and industrial processes			
ρ	State examples of natural products that are supplemented or replaced by agricultural and synthetic			
s ai	products			
er rce	Discuss the importance of water quality for human life, including defining potable water			
Earth's resourd potable water	Describe methods to produce potable water, including desalination of salty water or sea water and the			
e se	potential problems of desalination			
th's abl	Required practical 8: analysis and purification of water samples from different sources, including pH,			
Eart	dissolved solids and distillation.			
е Г	Describe waste water as a product of urban lifestyles and industrial processes that includes organic			
8 t	matter, harmful microbes and harmful chemicals			
sin	Describe the process of sewage treatment and compare the ease of obtaining potable water from			
1 1	waste water as opposed to ground or salt water			
10.	HT ONLY: Name and describe alternative biological methods for extracting metals, including			
4	phytomining and bioleaching			
	HT ONLY: Evaluate alternative methods for extracting metals			
4.10.2 Life cycle assessment and recycling	Describe, carry out and interpret a simple comparative life cycle assessment (LCA) of materials or			
e cy ing	products			
).2 Life cy essment a recycling	Discuss the advantages and disadvantages of LCAs			
0.2 essi rec	Carry out simple comparative LCAs for shopping bags made from plastic and paper			
4.1(asse	Discuss how to reduce the consumption of raw resources and explain how reusing and recycling reduces energy use (inc environmental impacts)			
	Chem ONLY: Define corrosion and describe rusting as an example of corrosion			
	Chem ONLY: Describe ways to prevent corrosion, including providing coatings, sacrificial protection and			
als	explain how sacrificial protection works			
eri	Chem ONLY: Describe the following alloys bronze, gold, steels and aluminium, their uses and describe			
nat	the benefits of using alloys instead of pure metals			
л вс	Chem ONLY: Compare the properties of materials, including glass and clay ceramics, polymers and			
Jsir	composites and explain how their properties are related to their uses			
	Chem ONLY: Discuss the different types of polymers and how their composition affects their properties,			
4.10.3 Using materials	including thermosoftening and thermosetting polymers			
ব	Chem ONLY: Explain what composites are and provide examples of composites and their benefits over			
	other types of materials			
p	Chem ONLY: Describe the Haber process, including the reactants and products, recycling of remaining			
s an rs	hydrogen and nitrogen and the chemical equation			
ces: lise	Chem & HT ONLY: For the Haber process interpret graphs of reaction conditions versus rate			
erti	Chem ONLY: Apply the principles of dynamic equilibrium to the Haber process and discuss the trade-off			
та Та	between the rate of production and the position of equilibrium			
NP NP	Chem ONLY: Explain how the commercially used conditions for the Haber process are related to the			
ofe	availability and cost of raw materials and energy supplies			
Th use	Chem ONL: Recall the names of the salts produced when phosphate rock is treated with nitric acid,			
.0.4 The Haber process a the use of NPK fertilisers	sulfuric acid and phosphoric acid			
4.10.4 The Haber process and the use of NPK fertilisers	Chem ONLY: Describe NPK fertilisers and the compounds they are composed of and compare the			
ব	industrial production of fertilisers with the laboratory preparations
